

Craig Lupien

---

## The Laboratory

U.S. Labs is dedicated to refining the human form. The Laboratory was established through grants and private funding in order to bring about improvement to the condition of the human body and the five presently proven senses. The collective goal of Dr. Lupien, Dr. Leone and Professor Lewy is to sacrifice the fragile states of their human bodies for the greater good of mankind. The documents you see here are just a fraction of the rigors endeavored and only show a sampling of their inventions as proof of purpose.

You no longer need question your place within our image obsessed culture. The work of U.S. Labs will bring you closer to an enriched life of presupposed improvement. You, the citizen, ultimately benefit from our experiments with self mutilation. The history of quality science and our continual efforts to improve our testing methods are the hallmarks of our dedication. Look for U.S. Labs line of self improvement products, pending F.D.A. approval, at a storekeeper near you. Enjoy your beautification.
